

CMImaging West Introduces SpineRay

SpineRay is a high quality affordable 17 x 48 Full Spine Acquisition Detector panel that eliminates the need for “stitching” conventional X-rays together. Currently, most practices take three or more images for practice cost-effectiveness and spend countless time-consuming minutes processing images together to get a full spine image.

Quite often, images are misaligned and require re-taking the images. Patient movement and accuracy all contribute to a quality image for diagnostic purposes. SpineRay also reduces X-ray exposure as you are taking one image, not three or more! SpineRay simplifies this workflow.

One exposure- One Image-Once and for all.
